### **DETAILED ACTION**

1. The preliminary admenment filed May 07, 2004 has been received and entered.

#### Information Disclosure Statement

2. Applicant's prior art citation filed May 07, 2004 has been received, considered and placed of record.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Cabrera et al. (U.S. Patent No. 6,123,359).

Cabrera et al. teach a method of suppressing fire in a space (col. 12, lines 1-4) comprising a mean for generating a first fire suppressing gas mixture from at least one non-azide solid propellant chemical (abstract) (col. 3, lines 6-9). The fire suppressing gas mixture includes a first gas, and the first gas is Nitrogen and capable of being delivered at least the first gas into the space (col. 8, example II).

4. Claims 9-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Kern et al. (U.S. Patent No. 5,038,866).

Application/Control Number: 10/672,169 Page 3

Art Unit: 3752

Kern et al. teach an apparatus for suppressing fire in a normally occupied enclosed space comprising a sensor for detecting a fire (14) (see Fig. 3), and at least one solid inert gas generator (Nitrogen, Aluminium –Oxide and etc.) (col. 5, lines 2-12), in response to receiving signal from the sensor, ignites to generate only a fire suppressing gas mixture for delivery into the enclosed space (see entire patent). The apparatus further includes an inert gas discharge diffuser (208) to direct the fire suppressing gas mixture into the enclosed space.

5. Claim 14 is rejected under 35 U.S.C. 102(e) as being anticipated by Italiane et al. (U.S. Patent No. 6,612,243).

Italiane et al. teach a gas generator for generating and delivering a fire suppressing gas mixture to an enclosed space comprising a housing (32), at least one pre-packed solid propellant (28) (col. 4, lines 66-67) disposed within the housing, a pyrotechnic device for initiating ignition of the solid propellant to thereby generate only the fire suppressing gas mixture (64), and a discharge diffuser (36, 250) for directing the fire suppressing gas mixture within the enclosed space.

# Allowable Subject Matter

6. Claims 2-5, 7, 11-13, and 15-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Application/Control Number: 10/672,169

Art Unit: 3752

### Conclusion

Page 4

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thach H Bui whose telephone number is 703-305-0063 and/or 571-272-4898. The examiner can normally be reached on Monday-Friday, 7:30-4 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dave Scherbel can be reached on 703-308-1272. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
